

Companion Course to  
Aztec Complete  
Pharmacy Tech Training

# PHARMACY TECHNICIAN EXCEL

PREPARATION FOR NATIONAL  
CERTIFYING EXAM

## The Leading Review Preparation Tool for Pharmacy Technician Candidates

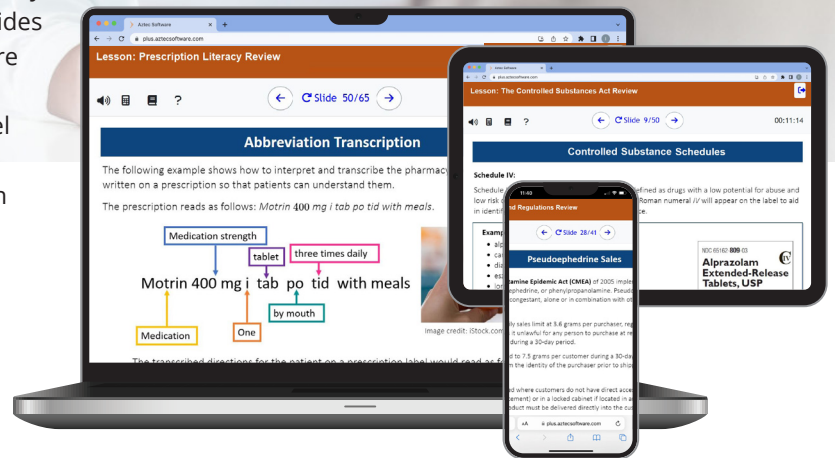

Aztec's Pharmacy Technician Excel is a companion course for students preparing to take the national Pharmacy Technician certification exam. Pharmacy Technician Excel is designed to be a final review tool for students who have completed, or will soon complete, a full Pharmacy Technician training course, meet the eligibility requirements, and are ready to take the national certification exam.

This PTCE and ExCPT review course is for students who want to excel in taking the national exam. This course focuses on building mastery level skills in the four content areas of the exam with specific focus on mathematical calculations. Unlike review books that are one dimensional, this course is interactive and has skill building activities to help with the review process.

The topics included in Pharmacy Technician Excel represent the subject areas on the national exam where students often need additional support and remediation. By focusing specifically on these subject areas, Pharmacy Technician Excel provides additional practice and instruction, beyond students' core Pharmacy Tech training course. In addition to subject area review and remediation, Pharmacy Technician Excel includes study tips, written by professors of pharmacy technician training programs, to better assist students in studying for the national exam.

Included in Pharmacy  
Technician Excel is a review of  
the following essential topics:

- Medications
- Federal Requirements
- Patient Safety and Quality Assurance
- Order Entry and Processing
